Object:

Salesforce objects are **database tables that permit you to store data that is specific to an organization**. Salesforce objects are of two types: Standard Objects: Standard objects are the kind of objects that are provided by salesforce.com such as users, contracts, reports, dashboards, etc.

Creation Of Cosmetic Object:

Create a software solution for managing cosmetic storage. The system aims to help users organize, track, and efficiently use their cosmetic products. It should provide features for adding, categorizing, and monitoring the usage of cosmetics.

> Create User Registration Object

- 
- > **Create Product Inventory Object**
 - > **Create Categorization**
 - > **Creation Of Expiry Tracking Objects**
 - > **Creation Of Usage Tracking Objects**
 - **Creation Of Inventory Reports Objects**
 - > **Creation On Profile**
 - > **Creating A User**
 - > **Create Record (Cosmetics)**
 - > **Create Report**

Users

A user is **anyone who logs in to Salesforce**. Users are employees at your company, such as sales reps, managers, and IT specialists, who need access to the company's records. Every user in Salesforce has a user account.

Permission Sets

A permission set is a collection of settings and permissions that give users access to various tools and functions. Permission sets extend users' functional access without changing their profiles.

FLOWS

Record-triggered flows are a powerful automation tool in Salesforce that can streamline business processes, reduce manual work, and improve productivity. They can be used to automate a wide range of tasks, from simple to complex, and can be tailored to meet the unique needs of your organization.

Lightning App

Apps in Salesforce are a group of tabs that help the application function by working together as a unit. It has a name, a logo, and a particular set of tabs. The simplest app usually has just two tabs.

Profile

A profile is a **group/collection of settings and permissions that define what a user can do in salesforce**. A profile controls “Object permissions, Field permissions, User permissions, Tab settings, App settings, Apex class access, Visualforce page access, Page layouts, Record Types, Login hours & Login IP ranges

Reports

Reports in Salesforce is a list of records that meet a particular criterion which gives an answer to a particular question. These records are displayed as a table that can be filtered or grouped based on any field.

Triggers

A trigger refers to an Apex code that is automatically executed before or after certain events occur in the Salesforce platform, such as when a record is inserted, updated, deleted, or undeleted. Triggers are used to automate business processes, enforce data integrity, and perform custom logic on data.

A before trigger in Salesforce is executed before the records are actually inserted, updated, or deleted in the Salesforce database. This allows the trigger to perform certain actions or validations before the data is saved to the database.

THANKYOU
